

Innovative material for detection dog

Published on 15 December 2018

To make their training easier, Biodesiv team has developed and patented an innovative material able to collect a huge amount of odorous molecules and releasing them in a controlled manner during months.

Tubes are available virgin, ready to be impregnated by odorous substances. They have especially been validated for training for detection of:

- Drugs
- Explosives
- Cadavers

They are marketed under the brand name Getxent, to be followed on Facebook, Twitter, LinkedIn and Xing.
